

Advanced Digital Workflow

Fujifilm’s XMF PressReady is a revolutionary digital print production workflow system to receive, pre-flight, impose, group, sort and deliver “Press Ready” jobs to digital presses using automated production flows. It allows print service providers to automate ordinary and repetitive tasks, allowing press operators to focus on more important aspects of the production process.

Conditional Automation

XMF PressReady offers multiple workflows that can be configured to make production decisions based on size, quantity, media, and page count. It eliminates the need for manual intervention, saving valuable time and reducing the possibility of operator error.

Streamlining Production

Fujifilm’s XMF PressReady brings a new level of efficiency to digital print production, providing print service providers with a powerful, flexible, and efficient workflow system that can automate processes, streamline production, and save valuable time by minimizing errors.

Hybrid Digital & Offset Print Production

XMF PressReady is integrated with Fujifilm’s established and respected XMF Workflow systems, allowing print businesses to manage both offset and digital production via one integrated workflow, making it an ideal solution for those who offer hybrid printing services. When used in combination with Fujifilm’s Revoria Press PC1120 and Revoria Flow DFE, XMF PressReady can completely automate the flow of print work from order intake to printed product by preconfiguring and automating the flow of work through the Revoria Flow DFE.

Print Management Across All Vendor Presses

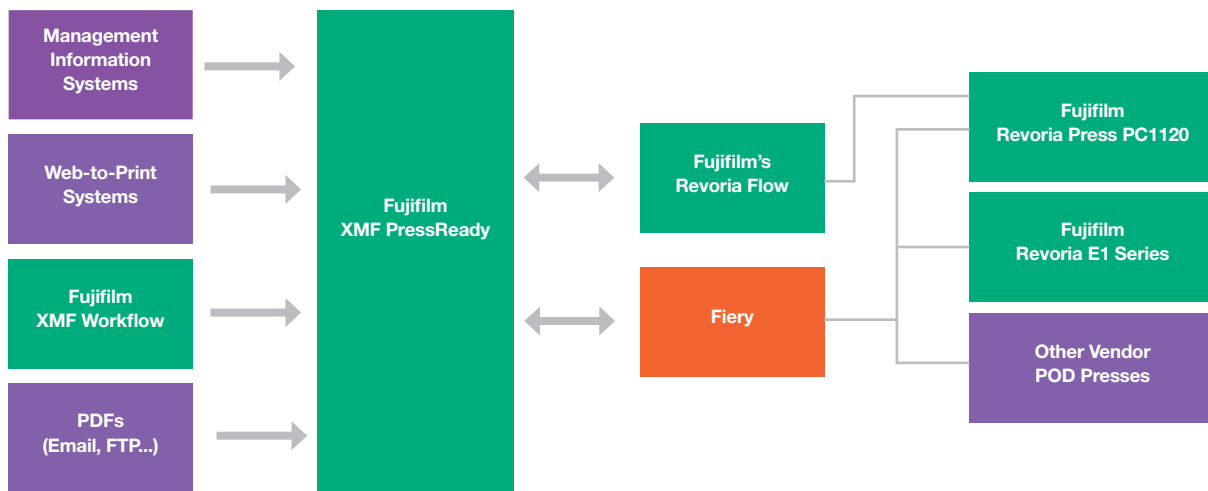

XMF PressReady allows print service providers to manage any connected digital press using a Fiery DFE through one system. This allows visibility of job print status, print job queue, media information, ink levels and much more across multiple vendors.

Key Features:

- Job input from multiple sources (JDF via MIS, W2P, XMF)
- Workflow front end to & deep integration with Revoria Flow & Fiery DFEs
- Automated flow from XMF Workflow to a digital press
- Print automation via “conditional branching”
- Job grouping & imposition to create print-ready layouts
- Addresses the needs of hybrid offset & digital and only printers
- Offers a step towards a “smart factory” concept
- Supports other vendor POD presses via the Fiery DFE
- Built by a company with over 20 years of experience in developing digital print works
